

The Keencut Material Guide fixes independently onto a bench and is the perfect companion to any Keencut bench top cutter. It precisely positions your material by creating an exact square edge in front of and at 90 degrees to the cutting machine. The high-profile edge guides the material as it enters the cutter. It speeds up alignment and guarantees an accurate cut. The Keencut Material Guide is superb for working with rigid and flexible materials, particularly off-the-roll materials that tend to curl or move. The Guide also offers extra stability for tough boards to aid the cutting process.

There is a precise, easy-to-read imperial and metric scale which you can install to align accurately to your cutter. A sliding stop sits against the top of the material; if you don't need the sliding stop, it just folds away.

The Keencut Material Guide is 924mm (36.5") long with a 900mm (35.5") long squared edge made from a durable aluminium extrusion and the highest quality components. It will fit on any bench of 18mm (3/4") thick or above and is simple to assemble and calibrate. Just scan the QR code on the Guide with your phone for immediate access to an easy-to-follow installation video.
